

Clean Code

Al momento de empezar a desarrollar la aplicación se presentó algo curioso, y es que todos los miembros del equipo tomaron como desafío aprender las tecnologías mencionadas (solo un miembro contaba con conocimientos muy básicos de React), por lo que al momento de codificar fue bastante complejo tener buenas prácticas y crear código limpio. A pesar de esto, se dio el mayor esfuerzo para seguir las prácticas sugeridas por la documentación oficial de React y Firebase. Sumado a lo anterior, se presentaron problemas al momento de instalar ESLint que hasta el momento no se han logrado solucionar.
